

## PYTHON PROGRAMMING: CONDITIONALS

Created by Dan Mark Anthony C. Clores

Program Description This document contains executable Python code designed for Jupyter Notebook. It focuses on using Conditionals (if-else statements) to evaluate a student's allowance and expenses.

Concepts Used

Variables and User Input Arithmetic Expressions Conditional Statements (if-else) Logical Comparisons

```
In [ ]: # Monthly Allowance Status Checker
# Created by: Dan Mark Anthony C. Clores
# Input
name = input("Dan Mark Anthony Clores: ")
allowance = float(input("100: "))
expense = float(input("50: "))
# Calculation
remaining = allowance - expense
# Output with Conditionals
print("\nName:", name)
print("Remaining: PHP", remaining)
if remaining < 0: print("Status: Allowance exceeded")
else: print("Status: Allowance is enough")
```
